

CP Check-Up™

Proactive, supportive,
responsive and free

Cerebral Palsy
ALLIANCE

All for you

It's all-inclusive. It's completely reassuring

0-6
yrs

The 2 hour regular check-up service that reassures, completely

Why it's so positive

CP Check-Up™ is exclusive to Cerebral Palsy Alliance. It focuses on and helps prevent the many common conditions associated with cerebral palsy, such as musculoskeletal complications, pain, sleep and behaviour difficulties.

By offering screening and surveillance for these associated conditions, CP Check-Up™ can positively influence the quality of life and future wellbeing of children and their families.

We support families in the decisions that will provide the right intervention, at the right time.

What makes it so effective?

CP Check-Up™ integrates a comprehensive and thorough process within a totally holistic approach.

Based on the latest global research evidence (with impressive successes in other countries), combined with Cerebral Palsy Alliance's renowned specialist team, makes this free service the leading check-up solution for children with cerebral palsy and their families.

We just feel more assured about our boy's future now. CP Check-Up has given us clear guidance and real help.'

More about our all-inclusive service

How it's so responsive

We use a range of assessments across many aspects of a child's life, such as physical status, functional and cognitive abilities, and emotional wellbeing to understand your child's growth and development, and to help plan and provide appropriate and timely interventions whenever needed.

After every CP Check-Up™, a report is made available for every family.

This screening report becomes an invaluable record for parents in the future, especially for accessing NDIS funding.

You know where you stand, and what to expect for your child's future, and more importantly how to deal with what's to come'

Why it's so collaborative

At one of our centre-based clinics, assessments to monitor your child and identify any actions required, are carried out by our specialist team.

Our specialist team includes an occupational therapist, physiotherapist, speech pathologist and also with a social worker or psychologist present.

This ensures our response is both wide ranging and deep, expansive and always collaborative.

2 hours. 4 steps

For children under the age of six, CP Check-Up™ is offered every six months. For older children, their check-ups will take place every 12 months.

Each two hour session involves four steps:

- Assess
- Monitor
- Identify and report
- Plan and provide

This integrated service is designed to reassure, respond and then refer your child to the relevant Cerebral Palsy Alliance specialist team, or other health professionals for immediate attention.

They're very detailed in their screening and can pick up any issues so you know what's around the corner and you can plan for it accordingly'

Our beliefs that make CP Check-Up™ the comprehensive answer

We believe this service is the reassuring choice as it's based on these core beliefs:

- No child's growth and development should ever be overlooked
- No child should ever miss out on realising their full potential in life
- No parent should feel alone and unsupported without anyone to turn to

My husband and I feel we're in such good hands with Cerebral Palsy Alliance's specialists. Their all-encompassing approach makes us rest a little easier'

We're on this journey with you

You deserve to feel completely reassured about your child. So to find out more about our all-inclusive check-up, or to chat with one of our team, please contact us.
